

SoracteLite is presented in China

The “2017 Ultrasonic Medicine Forum” in Zhejiang has been an excellent showcase for the introduction of SoracteLite treatment by Dr. Gianluigi Patelli. SoracteLite is the microinvasive treatment performed with the EchoLaser system and indicated for patients affected by Benign Prostatic Hiperplasia (BPH).

SoracteLite treatment was developed in the Pesenti Fenaroli Hospital of Alzano Lomabardo by Dr. Patelli and Dr. Ranieri, with the collaboration of Prof. Pacella. A first publication entitled “**Transperineal Laser Ablation for Percutaneous Treatment of Benign Prostatic Hyperplasia: A Feasibility Study**” has been issued by the “**Cardiovascular Interventional Radiology**” journal in April 2017.
