

## ACTA 2017 – SoracteLite treatment presentation

Dr. Gianluigi Patelli (MD, Pesenti Fenaroli Hospital – Alzano Lombardo (BG)) came back to China to present SoracteLite treatment during ACTA 2017 Congress in Guangzhou, China.

SoracteLite procedure with EchoLaser was developed by Dr. Patelli with the support of Prof. Pacella from Albano Laziale. Their cooperation resulted in the proposal of an alternative treatment for the Benign Prostate Hyperplasia that can be defined as “unique” in the micro-invasive procedures field, thanks to the use of extra-fine needles and to the *transperineal approach*, which allow the operator to avoid every kind of contact with the uretra.
